How To Order

EXAMPLE: Series No. 12704

Outlet Size

Option, Left-Hand 4" No-Hub Branch

Option, ABS Extension, through 10-1/2" Wall

Horizontal Fitting & Carrier Selection

1. If flow in waste line is from the right of the stack, the closet fitting should be a right-hand fitting.
2. If flow in waste line is from the left of the stack, the closet fitting should be a left-hand fitting.
Advantages of Off-The-Floor Plumbing Fixtures

WHY OFF-THE-FLOOR PLUMBING FIXTURES?
The reasons are many – including aesthetics, installation, cost, maintenance and sanitation. This concept in modern plumbing has been acknowledged for many years by leading architects, engineers and mechanical contractors to be far superior in all respects to systems with floor-mounted fixtures. The more significant advantages of off-versus on-the-floor plumbing fixtures and their required support and drainage systems are presented on these pages for your consideration when specifications are written.

AESTHETICS
In keeping with the current trends of architectural design toward smooth, uncluttered lines, off-the-floor plumbing fixtures are the necessary practical complement in toilet and restroom décor. Victorian pedestals and unsightly floor-mounted closets of a bygone year cannot be aesthetically integrated in contemporary designs.

INSTALLATION
Many factors, including cost, material, labor required, space, handling and others must be thoroughly evaluated when planning an installation. With on-the-floor water closets, slabs must be penetrated and sleeved at each fixture to accommodate waste piping which, in many instances, has to be suspended below the slab.

Such suspended piping requires concealment in multi-story installations, thereby necessitating drop or furred ceilings in the rooms below. The fitting and assembly of waste piping in such installations, as a rule, must be accomplished on the spot with the aid of scaffolding and extra mechanics, which contributes to high construction costs and affects not only the mechanical contractor but the structural, floor, wall and ceiling mechanics as well.

Conversely, with off-the-floor fixtures, there is no slab penetration in toilet room areas. The support and piping systems are concealed behind the walls. Such systems are ideally suited to the modern modular plumbing concept as they are readily fabricated either on site or in the contractor’s shop at significant savings over conventional piece-by-piece assembly. A well planned and executed off-the-floor fixture installation today will provide lasting benefits appreciated by future building occupants and owners.

MAINTENANCE AND SANITATION
The benefits of off-the-floor plumbing will immediately become evident to those involved in maintenance. Mechanically, off- and on-the-floor plumbing installations are similar in terms of service required. However, when service is necessary, it is generally agreed that off-the-floor fixtures and attendant systems are more easily maintained. With no obstructions, daily floor cleaning is accomplished more effectively in far less time than needed to work around on-the-floor fixtures.

Toilet rooms are the most susceptible of all rooms to unsanitary conditions. Therefore, sanitation should be the foremost consideration in the design of such rooms. On-the-floor fixtures, regardless of their efficiency or manufacture, provide natural harbors at the base for accumulated filth, which is virtually impossible to remove, never allowing total sanitation. The ever-present problem of floor deterioration adjacent to and under on-the-floor fixtures is completely eliminated with off-the-floor installations. Off-the-floor plumbing fixtures eliminate this potential health hazard, and toilet room floors are clear of obstructions which hamper efforts to achieve proper sanitary maintenance. Another advantage of off-the-floor fixtures is that they provide much greater rentable or usable floor space than do on-the-floor fixtures, and that is a factor which should be considered when fixture selection is made. The specification of off-the-floor fixtures will prove to be a wise and practical decision.
Advantages of Off-The-Floor Plumbing Fixtures

SUPPORT & DRAINAGE SYSTEMS
When JOSAM entered into the manufacturing of off-the-floor plumbing fixture carriers and fittings, extensive research was conducted into the requirements for support and discharge of these fixtures. From this research, the design of the JOSAM line of carriers and fittings evolved, including such innovations as invertible carriers to mount either siphon jet or blowout water closets, common vents on back-to-back fittings, dual feet on closet carriers to accommodate all fixture roughing heights in any floor construction and many others.

Our innovations have been copied, but not equaled, and they paved the way for universal acceptance of this line of products. In the ensuing years, this product line has been expanded to meet new requirements as they develop in the dynamic construction industry. The result is today’s most comprehensive range of products for off-the-floor plumbing fixture support and drainage.

TYPES OF WATER CLOSETS
Prior to the introduction of JOSAM universal carriers, it was necessary to specify carriers for each specific type of water closet. Even though JOSAM has taken this task out of carrier specifications, water closet types should be understood. There are two basic types of water closets, identifiable by their flushing action, that are normally used in commercial installations requiring carriers. These are siphon jet and blowout action water closets. The siphon jet bowl is attached to the carrier with four mounting studs arranged in a rectangular pattern whereas the blowout bowl is mounted on three studs arranged in a triangular pattern, point down. By inverting the carrier body, JOSAM carriers accommodate either type. Both siphon jet and blowout type water closets are also produced in floor-mounted wall-outlet pattern and require special drainage fitting connections.

Siphon Jet
This type, because of its quiet, efficient, sanitary flushing action, is usually specified in most commercial, institutional and hotel applications. Water is introduced into the bowl through the rim and up leg of trap through jets placed there to fill the trapway thus creating siphonic action to quickly evacuate the bowl. The large water surface in the bowl insures sanitation.

Blowout
This type is particularly suited to heavy use applications such as public facilities in stadiums and terminals. The flushing action produced by the jet of water in the outlet passage is strong for rapid evacuation of the bowl. Fouling problems are minimal. However, because of the powerful flushing action, this type of closet is noisy to operate.

ONE CARRIER FOR SIPHON JET OR BLOWOUT
CHASE-SAVER® is shipped pre-assembled for siphon jet closets and is quickly inverted for use with blowout closets.

12000-PF Series CHASE-SAVER® II Features

JOSAM 12000-PF Series CHASE-SAVER® II Closet Carrier meets the most rigid requirements for securing and supporting water closets. Some of the many specification and installation features are shown below. CHASE-SAVER® II can be used to mount either siphon jet or blow-out closets by inverting the carrier body. This carrier was specifically designed for pre-fabricated plumbing systems and exceeds the requirements of American National Standard ANSI A112.6.1M-1997. Pre-assembled carrier and pylon feet are packed with all the hardware. The extension and fitting are shipped separately for convenient handling at the fabrication or job site.

FITTING GASKET
Neoprene gasket with raised “O” ring beads on both sides provides a positive watertight seal between fitting and carrier.

PYLON FEET
Heavy-duty cast iron, compact, invertible (same foot both sides – no rights and lefts) outboard side mount for easy access to all assembly hardware, with “Wrap around” carrier retaining channel (1) which “locks” foot to carrier with only one bolt (2). Each foot requires only one floor anchor bolt and has additional “convenience” slots (3) for securing pre-fab transport frames, and pipe supports, incorporates handy elevation scale (4) divided in 1/2” increments on front to permit roughing-in at a glance, extends only 3/4” in front of carrier with flat vertical face and 13-3/4” height accommodates either standard or high rough mounting.

ANCHOR FOOT
Cast iron, rotatable, secured to back of fitting by means of fully threaded rod for complete adjustment, provides the final link in the 3 point support system for ultimate stability of the installation.

CARRIER BODY
Heavy-duty cast iron, compact, invertible for positive support of siphon jet or blow-out closets, with break-off tabs for rough-in less than standard 5-1/2”, at the base (in siphon jet position), accommodates complete range of rough-in heights in two models, one (standard) for 4-1/2” through 6” and the other for higher rough, bolts directly to fitting. Bolt securing standard, stud securing is optional.

FITTING GASKET
JIFFEE-SEAL Neoprene Gasket fits all closet gasket recesses.

BOWL STABILIZER BACK UP WASHERS
Provide gripping power necessary to prevent water closet from settling out of installed location over a long period of time.

HARDWARE
Zincbrite plating protects all hardware and cap nuts are finished in chrome.

ADJUSTABLE EXTENSION
High strength ABS plastic with built-in test cap, assembled to carrier body with positive taper threads, easily cut to desired length. Furnished 7” long standard for 1” minimum to 5-1/2” maximum dimension, and 12” long (specify -10 Option) for 10-1/2” maximum dimension.

SPECIFICATION: JOSAM 12000-PF Series coated cast iron CHASE-SAVER® II Closet Carrier with adjustable connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFFEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.
12000-OR Series CHASE-SAVER® II Features

Josam 12000-OR Series CHASE-SAVER® II Closet Carrier meets the most rigid requirements for securing and supporting water closets. Some of the many specification and installation features are shown below. CHASE-SAVER® II can be used to mount either siphon jet or blow-out closets by inverting the carrier body. This carrier was specifically designed for pre-fabricated plumbing systems and exceeds the requirements of American National Standard ANSI A112.6.1M-1997. Pre-assembled carrier and pylon feet are packed with all the hardware. The extension and fitting are shipped separately for convenient handling at the fabrication or job site.

**FITTING GASKET**
Neoprene gasket with raised "O" ring beads on both sides provides a positive watertight seal between fitting and carrier.

**PYLON FEET**
Heavy-duty cast iron, compact, invertible (same foot both sides – no rights and lefts) outboard side mount for easy access to all assembly hardware, with "Wrap around" carrier retaining channel (1) which "locks" foot to carrier with only one bolt (2). Each foot requires only one floor anchor bolt and has additional "convenience" slots (3) for securing pre-fab transport frames, and pipe supports, incorporates handy elevation scale (4) divided in 1/2" increments on front to permit roughing-in at a glance, extends only 3/4" in front of carrier with flat vertical face and 13-3/4" height accommodates either standard or high rough mounting.

**ANCHOR FOOT**
Cast iron, rotatable, secured to back of fitting by means of fully threaded rod for complete adjustment, provides the final link in the 3 point support system for ultimate stability of the installation.

**SPECIFICATION:** Josam 12000-OR Series coated cast iron CHASE-SAVER® II Closet Carrier with adjustable connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFFEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.
-32 WIDE CHASE CARRIER Features

Josam -32 Wide Chase Carrier is universal for all applications in any type of construction, providing positive support for either siphon jet or blowout off-the-floor closets whether construction involves monolithic floors, minimum or maximum floor fills and high or low roughing. The carrier assembly, separate from the fitting and face plate assembly, is ideally suited for installation in wide chases as it can be positioned in or immediately behind the wall where the closet support should be, regardless of stack or drainage line location. The -32 Carrier comes from the factory shrink wrapped and partially assembled for convenient storage until required for use with any Josam adjustable fitting and face plate assembly.

12000 CARRIER BODY
Compact cast iron heavy-duty construction, invertible with break-off sections to provide various roughing heights to meet all drainage and pitch requirements for waste line.

ANCHOR FOOT
Cast iron, rotatable foot is secured to back of fitting by means of fully threaded rod for complete adjustment.

NPT NIPPLE
Provided by others.

PYLON FEET
Heavy-duty cast iron, compact, invertible (same foot both sides – no rights and lefts) outboard side mount for easy access to all assembly hardware. (Same foot as our standard 12000 Series Carrier.)

ADJUSTABLE EXTENSION
High strength ABS plastic with built-in test cap, assembled to body with positive taper threads, easily cut to desired length. Furnished 7” long standard for 1” minimum to 5-1/2” maximum dimension and 12” long, (specify –10 Option) for 10-1/2” maximum dimension. Cast iron extensions are available on special order.

12000-32 CARRIER BODY
Compact cast iron heavy-duty construction, invertible and provides various roughing heights to meet all drainage and pitch requirements for waste line.

COUPLING
Heavy-duty cast iron coupling, threaded to allow connection between nipple and ABS extension.

FIXTURE GASKET
JIFTEE-SEAL Neoprene Gasket fits all closet gasket recesses.

BOWL STABILIZER BACK-UP WASHERS
Provide gripping power necessary to prevent water closet from settling out of installed location over a prolonged period of time.

SPECIFICATION: Josam -32 coated cast iron Wide Chase Closet Carrier with adjustable closet connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFTEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.

△ FOR DIM. LESS THAN 3-3/4" CUT EXT. * MAY VARY ±1/4"
Nipple Selection

The key to pipe chase width adaptability of the -32 Wide Chase Carriers and the component that makes them universal for all installation conditions is the 4 inch NPT nipple that connects the coupling of the carrier assembly to the adjustable fitting faceplate. This nipple is furnished by others, and the recommended length can be determined by using the chart below.

To provide proper fixture support, the carrier should be set directly behind or within the wall. To accomplish this in wide pipe chases with DWV piping either centered or offset, it is necessary to separate carrier and drainage fitting as required with nipples that are longer than 2-7/8”. The minimum dimension (A*) was determined using a 2-7/8” length nipple. Nipples ranging in length from 2-7/8” to 12” in 1 inch increments are identified on this page for specification when such construction conditions are encountered.

Recommended Pipe: 4” Galvanized Steel

Adjustable Carrier Installations

Installation of back-to-back 12000-PF Series Carrier showing minimum extension.

Installation of 12000-PF Series Carrier in a standard 12” wide pipe chase showing minimum extension.

Installations 90° Double Waste Fitting 15964 & 15984 Series

Installations of 15964 and 15984 Series double vertical 90° no-hub fittings where a closet and lavatory are installed in each room with one stack serving two rooms.
Bowl To Carrier Installation

To set bowl using finished hardware group “FH,” put a hex nut, back-up washer, and a bowl stabilizer on each mounting stud.

Adjust with front of back-up nut and washer at finished wall line.

If the back-up nut and washer are moved to clear irregularities in the finished wall, the extension MUST be adjusted an equal amount.

Place fixture gasket in toilet outlet and hang closet. Assemble fiber washers and JOSAM cap nuts to two studs on the center line of the closet outlet and one other stud below and tighten with a wrench.

Assemble fiber washer and JOSAM cap nut to remaining stud, hand tighten and take 1/2 turn with a wrench.

Extension Length Determination

This is a side view. The enlarged inset shows the depth of the gasket within the groove of the fixture and the extension with proper pressure on the gasket.

When the closet is installed on the carrier, the front end of the extension must be located properly in order to compress the gasket enough so that the gasket’s adhesive coated surfaces are in contact with the china and the face of the extension. This will help ensure a tight seal.

For closets which have a groove with a rectangular cross-section, Use this formula:  
\[ C = A + B - 1/2" \]

Where:  
A = Distance from Closet to Wall  
B = Depth of Groove in Closet  
C = Distance Extension Extends from Wall

For closets which have a groove with a V-shaped cross-section:  
Use the above formula, but an additional 1/8" (or more) may be added to C.
Adjustable Closet Carrier Options

The options shown below illustrate and explain various optional carrier components. These options must be specified and installed when the type of closet or installation dictates their use.

(-24) OPTION, FOR FLOOR-MOUNTED BACK-OUTLET CHINA CLOSETS
This option adapts adjustable as well as other types of fittings for securing floor-mounted back-outlet China closets. Any adjustable fitting is adapted as shown in Illustration A. Other types of fittings are provided with bosses to attach the closet securing studs at the correct dimensions for this type of closet. See Illustration B.

(-1) OPTION, TRU-SET POSITIONING FRAME (Siphon Jet Closets Only)
Made of high impact polystyrene, the TRU-SET Positioning Frame offers many advantages to the plumbing contractor. The positioning frame is mounted on the carrier studs at the time the carrier is being installed, thus it acts as a guide and template, eliminating problems caused by normal dimensional variations when the wall is being erected. Studs and adjustable extension are set to the frame, eliminating further adjustment when the fixture is being hung. Chances of bowl breakage are minimized since bowl is held the correct distance from finished wall.

NOTE: Sold only with JOSAM closet carriers.

(-VP) OPTION, VANDAL-PROOF TRIM
The JOSAM Vandal-Proof trim is designed to prevent tampering and possible damage to the fixture caused by vandalism. The Vandal-Proof trim can be used in place of the regular JOSAM cap nuts. Trim is installed using a hex key. After installation is complete, chrome plated expansion plugs which match the nuts, snap into place minimizing the chances of vandalism.

(-6) OPTION, SUPPLY PIPE SUPPORT
Support assembly attaches to an upper carrier mounting stud and securely holds water supply pipe running to the flush valve. This hanger prevents movement of water piping during and after construction, protecting piping as well as the flush valve. When ordering, specify type of pipe to be supported.

ILLUSTRATION A

ILLUSTRATION B

(-24) OPTION, FOR FLOOR-MOUNTED BACK-OUTLET CHINA CLOSETS
This option adapts adjustable as well as other types of fittings for securing floor-mounted back-outlet China closets. Any adjustable fitting is adapted as shown in Illustration A. Other types of fittings are provided with bosses to attach the closet securing studs at the correct dimensions for this type of closet. See Illustration B.
EXPLANATION AND USE OF CHART
The chart represents solutions for nine separate applications, each line being the solution for a different application. Notice that for every application, there is a solution using only standard carriers. Use of the 12000-35 carrier can be avoided in most situations. Column 1 represents a fixture mounted on a vertical stack fitting. Columns 2 through 8 represent the locations of additional fixtures mounted on horizontal fittings. Each column is divided into three sub-columns, identified as A, B, and C. The ● and /triangleup symbols show the types of carriers that can be used for either normal or high rough in that particular location. Blank spaces mean that the carrier cannot be used in that location. The far right-hand column shows the slope or pitch per foot of the horizontal drain line to the stack. Notice that lines 5 and 6 show a slope of 1/4 in. per foot. The chart applies to either siphon jet or blowout fixtures, and should eliminate confusion about installations for the physically disabled.

CLOSET CARRIER SELECTION
INSTALLATIONS FOR THE PHYSICALLY DISABLED
Based on 3 in. difference in elevation between normal and high rough fixtures, and on 36 inches between fixtures [horizontally]. See note below.*

Carriers ○ and /triangleup are required for back-to-back mounting when one fixture is normal rough and the other is high rough.

EXAMPLE:
A. Requirement: Plans call for rest rooms back-to-back, each with six water closets, one of which is to be high rough.
B. Solution: Because six fixtures are involved, refer to column 6, line 7. Note that a standard 12000 Carrier [sub-column B] can be used for the high rough fixture at the upstream end of the branch. The remaining five fixtures, all at normal rough, can be mounted on standard 12000 Carriers as shown in columns 1 through 5, sub-columns A.

Note that the standard 12000 Carrier can be used in a high rough position at the stack or at the upstream end of the horizontal branch, depending on the number of closets required, as shown in sub-columns B. Either of these locations is preferred for the high rough water closet.

Thus, for most installations, the standard 12000 Carrier is suitable. However, if the high rough water closet cannot be so located, the 12000-35 high rough Carrier can be used in almost any location, depending on the number of closets required. In this case it may be necessary to increase the horizontal spacing between locations to some distance greater than 36 inches. If so, the above chart is no longer applicable. Furthermore, whenever the fixture arrangement for back-to-back water closets requires high rough on one side and normal rough on the other side, the 12000-35 Carrier must be used on the high rough side.

For unusual requirements not covered by this chart, we suggest you contact your JOSAM Representative.

*NOTE: Even though specific construction requirements for the physically disabled may vary from one jurisdiction to another, those specified in American National Standard ANSI A117.1-1980 are generally accepted. In this standard, Section 4, Paragraph 4.16.3 states that the height of water closets shall be 17 to 19 in. to the top of the seat. This confirms the water closet rim height of 18 in. for the physically disabled, previously established in ANSI A112.19.2, which is a standard for vitreous China plumbing fixtures. In compliance with these standards, the above selection chart has been developed using a 3 in. difference in elevation between normal rough fixtures [15 in. rim height] and high rough fixtures [18 in. rim height].
Wheelchair Closet Carrier Installations

Accommodations for the physically disabled who depend on wheelchairs for mobility are of prime importance and should be included in any building where public toilet facilities are provided. Off-the-floor water closets are ideally suited for wheelchair use. In addition to the sanitation benefits, the elevation is not fixed as it is with the floor-mounted closets. By utilizing the JOSAM line of carriers and fittings, the wheelchair closet can be located anywhere in a battery. See Carrier Selection Chart. The illustrations below show the wheelchair closet in various locations.

(-35) Option Carrier can be used with all adjustable fittings. When used with blowout closets over 12 1/2”, specify –M1358.

To the left is a possible installation utilizing the –35 Option at the end of a battery of standard rough carriers.

The above shows an installation utilizing a standard JOSAM stack fitting with the carrier on this fitting roughed for wheelchair use. With this installation one to three horizontal fittings can be connected to the stack fitting.
### 11001 SERIES

**APPLICATION**
For wall-hung water closets where carrier fitting is not required.

**SPECIFICATION**
JOSAM 11001 Series coated cast iron universal pipe grip Closet Carrier with 4" pipe adapter, adjustable feet and finish hardware and trim to support siphon jet or blow-out wall-hung water closet. Waste piping and fitting provided by others.
