⚠️ **WARNING:** Cancer and Reproductive Harm - [www.p65warnings.ca.gov](http://www.p65warnings.ca.gov)
Concealed Arms  UNITRON® II  Features

JOSAM concealed arm Lavatory Carriers secure and support lavatories by means of cast iron arms with leveling and securing devices. By virtue of their design, they accommodate all types of lavatories punched for concealed arms. The cast iron arms are furnished as standard in three different lengths. The leveling and securing methods are the same for each arm length. After the carrier is installed and the walls completed, the sleeve and arm assembly is adjusted and installation of the lavatory is made by sliding it over the arms, leveling it through the access holes provided and then securely locking it in place with the LAVALOC® Securing Device.

HEAVY-DUTY INVERTIBLE HEADERS
The heavy-duty cast iron invertible headers supplied with JOSAM floor-mounted carriers can be installed as shown or inverted and installed on the outside of the upright. The tie rod is secured in place against the upright by the header, eliminating need for set screws.

RECTANGULAR STRUCTURAL UPRIGHTS
Josam has selected heavy-duty structural steel uprights as the standard for floor-mounted carriers. These uprights are narrow, for use in drywall construction, yet will support more weight than the round tubular uprights.

HEAVY-DUTY WELDED FEET
The rectangular structural steel uprights are furnished with welded feet designed for use in today’s modern drywall construction. They must be bolted to the floor. Recommend 1/2” bolts by others.

Today’s thin-wall construction demands that the carrier support the fixture completely independent of the wall construction, whether it is a lavatory, sink, urinal or water cooler. Due to the rectangular structural shape of the uprights and the welded feet, deflection is kept to a minimum, protecting the fixtures as well as the finished wall surface, thus eliminating the need for any alternate steadying methods. It is recommended, with all JOSAM carriers, that the feet be securely bolted to the floor for proper support. Rectangular structural uprights with welded feet are furnished with all floor-mounted JOSAM concealed, exposed arm or plate type carriers as standard, therefore there is no additional charge for this feature.

Standard Plate Features

JOSAM, after testing and studying many alternates for plate type carriers, has designed and developed a standard hanger support and bearing plate, that can accommodate more than 300 various fixtures.

A complete, easy to use “Standard Plate Application Manual” is included with every carrier. This manual gives the various plate dimensions required for a complete installation.
Concealed Arms Features

1. Tandem keepers in slots on the arm permit positioning of leveling screws on the job to suit punchings of any lavatory specified.
2. Screws in keepers can then easily be moved up or down to level the lavatory.
3. The securing lock device is positioned on the arm and tightens against the fixture to hold it rigidly in place.
4. The sleeve can be adjusted to suit various wall thicknesses.
5. The final setting of the arm out from the wall can be made from the face of the finished wall after the wall is built.
6. The set screws are easily accessible for quicker adjustment.
7. Arm with the locking device, tandem keepers, and adjustable sleeve, is completely assembled at the factory.
8. Hardware is plated to prevent corrosion.

Parts & Details Lavatory, Sink & Urinal Carriers

The drawings on this page show the relationship between mating parts of carriers covered in this section.
### Options

The options shown below illustrate and explain various optional carrier components. These options must be specified and installed when the type of construction or fixture dictates their use. See specific series for available options.

#### (-10) OPTION, EXTENSION FOR THICK WALLS
This option provides the extension hardware required for mounting fixtures when the wall thickness (T Dim.) is greater than the maximum thickness shown on drawing. Specify T Dim. when ordering this option.

#### (-60) OPTION, VALVE PLATE ON UPRIGHT
allows carriers with uprights to be converted to support both hospital lavatories and knee or foot operated valves supplying these lavatories. Valve plate is securely fastened to upright and is supplied with hardware and chrome-plated trim for mounting valve.

#### (-66) OPTION, SPLIT HEADER FOR STAINLESS STEEL ARMS
In many cases arms are supplied by the manufacturers of stainless steel fixtures. The mounting hole spacing in the back of the arm (Y Dim.) varies widely by sink and manufacturer. The -66 split header is adjustable to allow for the mounting of this type of sink and arm combination.

#### (-67) OPTION, CONCEALED ARM WHEELCHAIR LAVATORY
Most major fixture manufacturers offer an elongated lavatory especially designed for the wheelchair user. This lavatory requires a special type carrier which roughs the lavatory higher than normal and also will support the long extension of china.

#### (-75) OPTION, 2" ESCUTCHEONS
provide manufacturers’ specified distance of 2” from finished wall to back of a slab type lavatory to prevent water from deteriorating finished wall when concealed arms are used. Furnished in polished chrome.

#### (-76) OPTION, 4" ESCUTCHEONS
permit a 4” dimension between finished wall and fixture when specification or design requires. Used on concealed arms to prevent water from deteriorating finished wall. Furnished in polished chrome.

#### (-77) OPTION, 6" ESCUTCHEONS
designed for slab type lavatories for wheelchair patients when concealed arms are used, to prevent water from deteriorating finished wall and provide space needed to accommodate a wheelchair. Furnished in polished chrome.

**REUSABLE ALIGNMENT TOOL**

**SERIES 17000**

**Features**

- Used with Josam Floor-Mounted Fixture Carriers with uprights; concealed and exposed arm type, plate-type.
- Reusable bracket is less expensive than other one-piece pre-fab carriers.
- No obstruction for vertical water supply and waste piping.
- Movable uprights allow adjustment to meet all job-site conditions
- Carriers remain in standard packaging; no over-sized boxes required.

**Instructions**

1. Determine Upright Centers;
   - For Concealed and Exposed Arm Carriers, Add 4” to the arm center.
   - Consult carrier rough-in chart for upright centers on plate-type carriers
2. Set adjustable bracket to appropriate locating position.
3. Attach 17000 Alignment Tool at the bottom of both uprights.
4. Secure uprights to floor with 1/2” bolts (by others).
5. Remove reusable alignment tool and attach to the top of the uprights and set tie-rod or plate position.
