

Is Listeria Harboring In Your Facility's Drainage System?

Hygiene is one of the most important factors in every food and beverage processing facility. An important step in establishing effective hygiene is designing and installing a sanitary drainage system that controls the risk of bacteria. Josam's stainless steel drainage system offers a non-porous surface with hygienic traits. Don't ignore harboring bacteria in your drainage system that could cause diseases and plant shutdowns.

- Pipes/fittings, floor/trench drains, & slot channels
- Made of 304/316L austenitic stainless steel
- Customizable to meet drainage requirements
- Cost effective solutions • Long life expectancy

Bacteria Could Be Growing Beyond The Surface
