

Meeting Domestic Compliance at New Military Training Center

Location:
San Antonio, Texas

Industry:
Government

Category:
Drainage

Products Installed:
Josam drains, floor sinks,
and carriers

Problem

The construction of a new training center at an Air Force base in Texas required a large-scale drainage and carrier package that complied with Buy American Act construction material provisions. Domestic compliance was mandatory, leaving no room for sourcing errors or extended replacement timelines.

A **WATTS** Brand

Solution

To simplify procurement and maintain compliance, the contractor specified Josam domestic compliant drainage solutions. Working closely with the manufacturer's representative and factory support teams, the contractor verified product selections early in the process to confirm alignment with Buy American Act requirements.

Compliance documentation confirming that the products met domestic sourcing standards was incorporated directly into the submittal package. This proactive approach helped streamline the approval process while providing project stakeholders with confidence that the materials met federal procurement requirements.

The project incorporated a broad range of domestic compliant drainage and carrier solutions, including floor drains, trench drain systems, drinking fountain carriers, lav carriers, urinal carriers, closet carriers, floor sinks, and cleanouts. By sourcing these components from a single manufacturer, the contractor was able to simplify coordination, reduce administrative workload, and maintain consistency across the installation.

Results

The availability of a complete portfolio of domestic compliant drainage products allowed the contractor to meet Buy American Act requirements while keeping the project moving forward. Submittals were processed smoothly, and materials were delivered to support the installation schedule without introducing compliance concerns.

By providing multiple compliant products under one manufacturer, Josam helped streamline procurement, reduce documentation complexity, and support the successful construction of a critical military training facility.

“

**Josam is our preferred
drain manufacturer
because of performance
and quality, whether it's
domestic or foreign. ”**
